BEEFGEN
TRUSTED LIVESTOCK EXPORT PARTNER

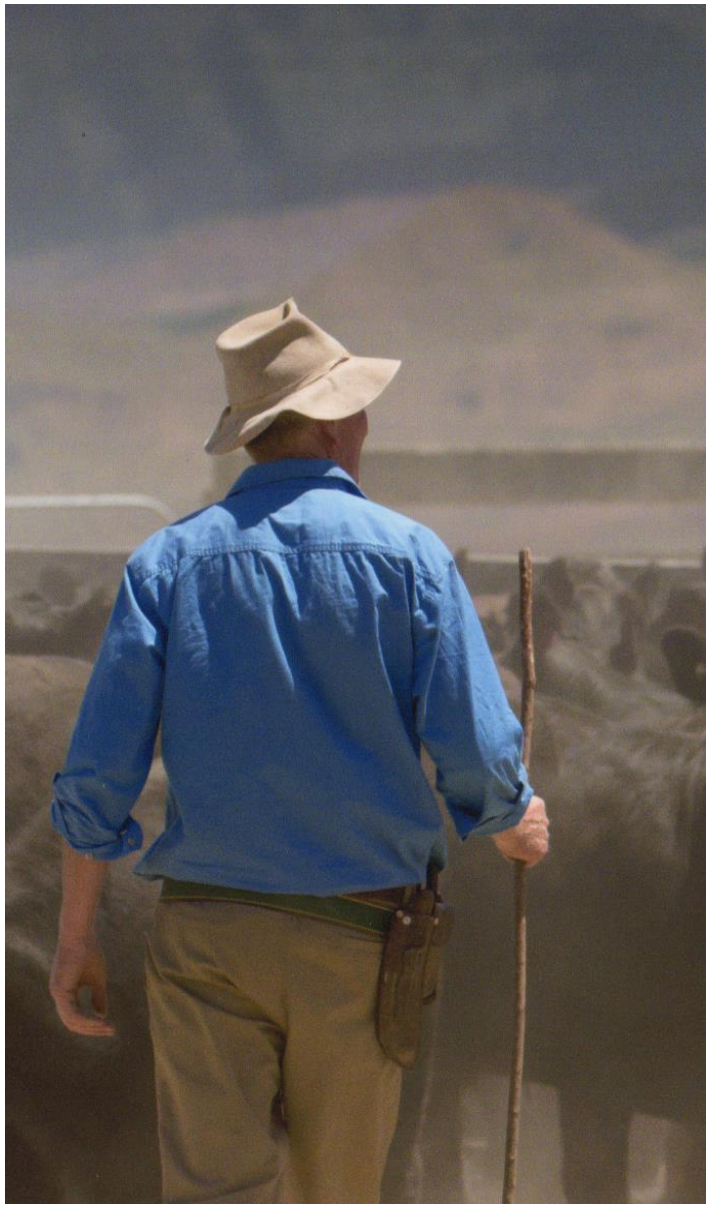
ABOUT US

BEEFGEN is a trusted livestock export business that has proven capabilities in the management of the entire export process for our customers; from sourcing quality livestock to delivering them to the destination country.

Our experienced team is capable of managing cattle exports for **breeders, feeders, and slaughter** markets. We export from both Australia and New Zealand to destinations around the world.



BEEFGEN has successfully exported tens of thousands of high-quality breeding livestock from Australia and New Zealand to destinations around the world. We specialize exclusively in livestock exports. We provide our clients with a complete end-to-end deliver service, every stage of the process is managed by BEEFGEN's team, guaranteeing excellence and care in every detail.

OUR OPERATIONS

BEEFGEN AUSTRALIA & NEW ZEALAND - ENGLISH

EXCELLENCE GUARANTEED

BEEFGEN has consistently maintained an excellent record of export operations within the industry, achieving exceptionally low mortality rates during the international transportation. Animal welfare is given the highest priority throughout the export process, ensuring that every animal is well cared for and protected from beginning to the end.

A GLOBAL SUPPLY CHAIN

WORLD-WIDE DELIVERY

We maintain close partnerships with major global transport companies around the world. Whether by air or sea, BEEFGEN can efficiently organize tailored transportation solutions for different categories of animals, ensuring safe, timely and welfare focused delivery every time.

EXPORT FROM

EXPORT TO

PROFESSIONAL TEAM

BEEFGEN operates the entire export process – from livestock selection and health inspections to pedigree verification, quarantine management and transportation – ensuring every animal reaches its destination safely.

Each animal is hand-selected by our team and tagged with an electronic ID and VID tags, guaranteeing full traceability throughout the journey.

ANIMAL WELFARE

As a globally oriented company, BEEFGEN places great importance on animal welfare.
We understand that without a strong welfare system, the quality of livestock exports cannot be guaranteed.
We pay closse attention to how animals experience transportation and continually increase human supervision to minimize stress at every stage.
Our commitment is to make animal welfare is the top priorty in everything we do.

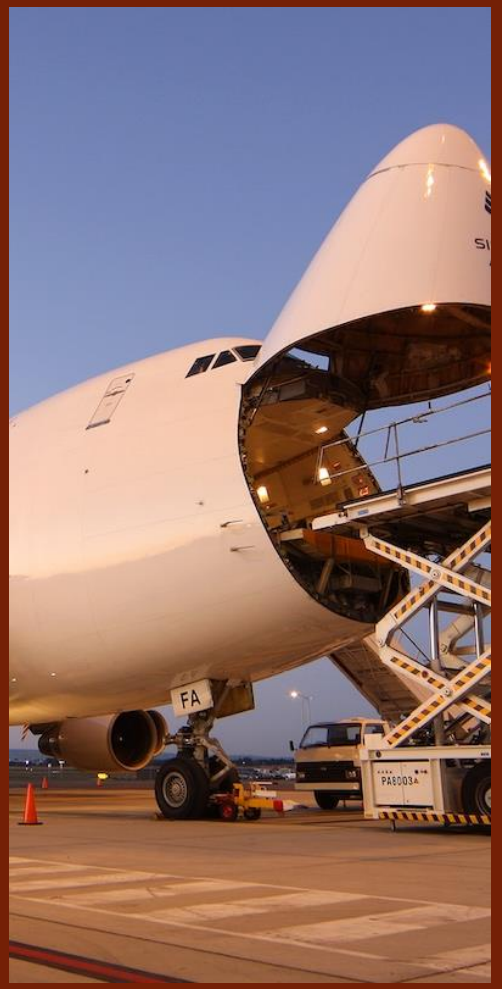
SELF-OWNED QUARANTINE FACILITY

BEEFGEN AUSTRALIA & NEW ZEALAND – ENGLISH

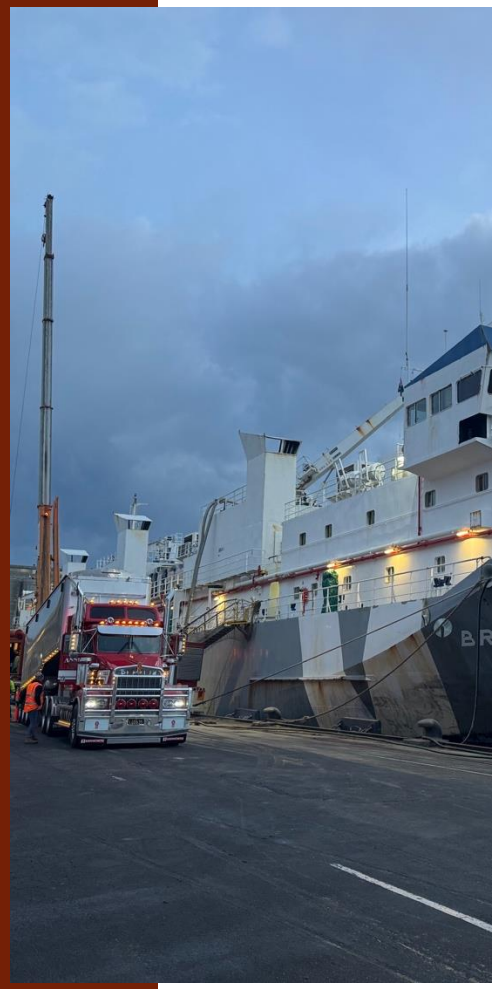
BEEFGEN operates a self-owned export quarantine facility in Victoria, Australia; strategically positioned to access the ports of Portland, Adelaide, and Geelong.

Spanning over 1,600 acres, the facility can accommodate more than 10,000 cattle in a single consignment.

Purpose-built for international livestock exports, it feature a fully automated cattle drafting system designed for efficiency and animal welfare. Over the years, the facility has successfully delivered hundreds of thousands of quality livestock to destinations worldwide, establishing itself as one of the most trusted quarantine facilities in Australia.



INTERNATIONAL TRANSPORTATION



Air transport is the safest and fastest way to move livestock. Within hours, animals can be delivered to almost any city in the world with minimal stress. However, due to higher costs and limited capacity, air transport is generally reserved for breeding animals of exceptional genetic value.

Sea transport remains the most widely used method for livestock export.
It offers significant advantages in capacity and cost efficiency while maintaining high standards of animal welfare, making it ideal for large-scale shipments of livestock.

MOST POPULAR BREEDS

HOLSTEIN

Holstein Friesians are high-producing dairy animals proven adaptable to a wide range of environmental conditions worldwide.

ANGUS

Globally prized beef breed, renowned for marbling, feed efficiency, and adaptability. ideal for premium beef production and crossbreeding programs.

JERSEY

Efficient dairy breed known for rich, high-butterfat milk, easy calving, and adaptability to various farming environments worldwide.
